PROFILE

Software architect with **13 years of professional experience**. Architected a 10+ service, event-driven platform on Kubernetes for **HP**, and now modernise legacy Java and PHP SaaS APIs on **AWS and Cloudflare** at InfoPro Digital Automotive. Builds secure REST APIs and event-driven integrations (Apache Pulsar, AWS SQS), implements observability (Grafana, Datadog, ELK Stack) and manages incident response. Former **founder** of a web development company and **startup tech lead** who took a restaurant product from scratch to an MVP launched for investors.

TECHNICAL SKILLS

Architecture: Distributed systems; event-driven architecture; microservices; REST API design; legacy modernisation

Backend: PHP (Laravel, Symfony, Slim); Python (FastAPI, Flask); Java

Cloud & containers: AWS; Cloudflare; DigitalOcean; Docker; Kubernetes

Data & messaging: MySQL; PostgreSQL; MongoDB; Redis; Apache Pulsar; AWS SQS; Redis Pub/Sub

Reliability & delivery: Grafana; Datadog; ELK Stack; Jenkins CI/CD; SonarQube; incident management; postmortems

Frontend & tooling: JavaScript; TypeScript; Node.js; Hono; React; Inertia.js; Vue; Alpine.js

PROFESSIONAL EXPERIENCE

Senior Software Developer | InfoPro Digital Automotive Sep 2024 - Present

Barcelona | Main B2B platform for car parts distributors in the Spanish market

- **Reduced production incidents by 20%** through systematic refactoring, stronger test coverage and safer deployment practices.
- Modernise legacy Java and PHP SaaS APIs on AWS and Cloudflare that integrate data from multiple providers; chose Cloudflare edge caching over scaling the AWS origin because traffic was mostly read-heavy lookups, which cut origin load and cost.
- Manage incident response: severity-based triage, resolution estimates and structured postmortems to drive long-term reliability improvements.
- Mentor junior developers through code reviews and shared backend engineering practices.

Tech Lead | Wivapp.com Feb 2024 - Sep 2024

Barcelona

- Led development of a new restaurant product from scratch, built with Laravel, Inertia.js and React on DigitalOcean Kubernetes.
- Chose a modular monolith over microservices to deliver the MVP in 3 months, then launched it to present the product to investors.
- Stepped down when the venture did not move past the investor stage.

Senior Backend Developer | Convelio May 2022 - Feb 2024

Paris, France | Logistics scale-up, €30M Series B (2022)

- Designed and maintained secure PHP APIs for a high-volume logistics platform serving 1,000+ clients per week, meeting its availability SLA.
- Improved API performance and reliability, cutting response times by 200–500 ms per request; implemented observability with Grafana, Datadog and the ELK Stack.
- Centralised the API contract in the OpenAPI Specification (formerly known as Swagger) so multiple frontends consumed one backend API; OpenAPI contract tests let frontend and backend teams evolve independently without breaking changes.
- Removed 10,000+ lines of dead and unsafe legacy code, improving security, performance and maintainability.
- Raised code quality through automated testing and peer code reviews.

Senior Programming Analyst | HP

Aug 2017 - May 2022

Barcelona | Consultant at HP through K-LAGAN

- Architected and operated a distributed platform of **10+ Docker-based microservices on Kubernetes** in production, processing data from 3,000+ high-value customers that fed business-critical automated decisions.
- Designed event-driven integrations with Apache Pulsar, AWS SQS and Redis Pub/Sub to decouple services for scalability and fault tolerance; chose AWS SQS over self-hosted RabbitMQ for cloud workloads because a managed queue removed broker operations from a small team.
- Built secure API integrations and background processing in Laravel, and data pipelines and robotic process automation (RPA) in Python.
- Built and maintained Jenkins CI/CD pipelines with SonarQube quality checks, reaching 80% code coverage across the platform.
- **Led remote engineering teams across Europe and Asia**, running architecture reviews, code reviews and technical mentorship.

EARLIER EXPERIENCE

Full Stack Developer | Health Dataline Europe SA

Mar 2017 - Aug 2017

Rebuilt the mobile front end of 10+ client eCommerce sites and built internal data APIs.

Co-Founder & CEO | SeeDoCare S.L.

Oct 2015 - Mar 2017

Founded and ran a web development company in parallel with employed roles; won 3 clients in year one.

Software Developer | Emotion Experience

Nov 2016 - Feb 2017

Built interactive brand installations for GFT, including the GFT Lab, driving LED displays and interactive panels.

Web Developer | Caravelo

Nov 2015 - Nov 2016

Built Volado Volaris, a last-minute fare product for Volaris airline, and a design system used by 2 new airlines.

Web Developer | SIQUR S.P.A.

Apr 2015 - Nov 2015

Built the Spanish eCommerce site and a content blog; ran SEO, analytics and campaigns.

Web Developer Instructor | CIPSA

Oct 2014 - Apr 2015

Taught full-stack web development to 50+ students; more than half found a job after the course.

Web Developer | Mediterrani Food

May 2013 - Jun 2014

Built the company website and content marketing that brought in 10+ new clients.

SELECTED OPEN-SOURCE WORK

Equipment - Maintain a Python scaffolding framework used in production, with configuration, storage, database connections, scheduled tasks and queue management.

PHP developer tooling - Published Packagist packages, including Array Diff Multidimensional, Laravel Email Failer and PHP SonarQube Scanner.

AI agent skills - Maintain reusable skills that automate engineering workflows.

EDUCATION

Web Development Master | CIPSA, Barcelona | Sep 2013 - Jun 2014

Bachelor of Arts (B.A.), Music Theory and Composition | Conservatori Liceu, Barcelona | Sep 2010 - Jun 2014

Bachelor of Arts (B.A.), Composition | Sibelius Academy, Helsinki | Sep 2012 - Jun 2013
